

TECHNICAL NOTES

1.- Technical Debt : This project is built on Frontity for the frontend, which has known incompatibilities with Node.js versions > 16. To deploy successfully, one option can be to use Docker or container based technology where [Node.js](https://nodejs.org/en/) can be set up to 12, 14 or 16 versions. Using Node 18+ will likely cause build failures due to Frontity's legacy dependencies.

2.- Long Term Solution: Migration to Next.js , a react based framework, to ensure stability and long term support. Another option can be abandoning completely the headless stack and rebuilding using traditional WordPress.

3.- API KEYS: All API keys (**EmailJS, Api Ninjas**) have been removed from the code. Please replace them with your own service credentials in the different components.

EMAIL JS: <https://www.emailjs.com/> Its use on single property detail page forms → Components related MyFormReservation.js , ScheduleCall.js , ContactFormSendgrid.js.

Email js code example : emailjs.sendForm('service_ID', 'template_ID', form.current, 'PUBLIC KEY')

All mail through the service arrives at the end to classicjerusalem@gmail.com email.

API NINJAS: For Currency Conversion <https://api-ninjas.com/> **Components to check:** RateExchange.js, ApiCall.js

Note: Ask the client if he still has his SendGrid Account.

SENDGRID: Components to check : SuscribeForm.js.

4.- Main files:

[frontity.settings.js](#) file is where the REST API URL is setup :
<https://realestateadmin2025.classicjerusalem.com>

[Root.js](#) call all the main components

[Index.js](#) for preprocess Iframe, Image native components and perform actions.
